Subject Index

A

Airline flight cancellations and delays, framework for, 266–280
Airline scheduling and routing, hub-and-spoke system, 281–297
Airline seat inventory control, dynamic, model for, 252–265
Airport, increasing capacity, landings at Logan Airport, 211–227
Air traffic control
  increasing airport capacity, landings at Logan Airport, 211–227
  static ground-holding policies for, 228–238
Algorithms
  dual-ascent, location, balancing requirements, 90–101
  equilibrium model, urban personal travel and goods movements, 161–174
  location problems, equivalence of dual methods for, 194–199
  market equilibria and disequilibria, 4–15
  primal-dual heuristic, multicommodity network flow problems, 102–117
  routing model, pickup and delivery, 315–329
  static ground-holding policies, for air traffic control, 228–238
  traffic equilibrium, with responsive control, 118–132

B

Balancing requirements, multicommodity location-allocation problems with, 90–101

C

Capacity constraints, competitive spatial price discrimination with, 55–61
Compatibility, networks and competition, 62–72
Competition, networks and compatibility, 62–72
Competitive location models, framework and bibliography, 44–54

D

Distribution system, travel distances, empirical distance measure, 341–349

E

Empirical distance measure, general considerations on use of, 341–349
Equilibrium
  competing networks, 73–80
  dynamic traffic, paradox, 148–160
  3-facility Hotelling model, tree network, 39–43
  model
    congested public transport systems, 133–147
    urban personal travel and goods movements, 161–173
  traffic, responsive traffic control, 118–132
  user, traffic corridor, 16–24

G

Game theory concepts, cost allocation, defined on location problems, 81–86

H

Hub-and-spoke system, airline schedule and routing, 281–297

I

Infrastructure facility deterioration, latent, prediction of, 174–193

L

Location theory, cost allocation games defined on, 81–86

M

Market models, equilibria and disequilibria, 4–15
Metering, dynamic traffic equilibrium, 148–160
Models
  analytic, one-to-many distributions with transshipments, 330–340
  arrival processes, perishable asset revenue management situations, 239–251
  competitive location
    3-facility hotelling, tree network, 39–43
    framework and bibliography, 44–54
  dynamic airline seat inventory control, multiple seat bookings, 252–265
  equilibrium
    congested public transport systems, 133–147
    urban personal travel and goods movements, 161–173
  location, obnoxious facilities, 350–362
  nested logic, 395–399
  routing, pickup and delivery, 315–329
  travelers' postwork activity patterns, 381–394
Multicommodity location-allocation problems, dual-ascent, location, balancing requirements, 90–101

N

Nested logic model, two properties of, 395–399
Networks
  compability and competition, 62–72
  competing, equilibrium in, 73–80
  competition on, introductory notes, 1–3
  competitive design, pricing, 25–38
  market equilibria and disequilibria, 4–15
  mulcommodity flow problems, primal-dual heuristic for solution of, 102–117
  tree, 3-facility hotelling model, equilibria in, 39–43

O

Obnoxious facilities, location models with routing considerations, 350–362
Origin-destination matrices
  dynamic estimators, using traffic counts, 363–373
  problem of inconsistency in, 374

P

Paradox, dynamic traffic equilibrium, 148–160
Pavement, infrastructure deterioration, latent, prediction of, 174–193
Perishable asset revenue management situations, arrival processes, modeling of, 239–251
Personal travel and goods, urban, equilibrium model, 161–173
Pickup and delivery, routing model for, 315–329, time windows, 298–311
Pricing, problem, competitive network design, 25–38
Primal-dual heuristic, network-based, multicommodity network flow problems, 102–117
Public transport systems, congested, equilibrium model, 133–147

R

Routing, location models, obnoxious facilities, 350–362

S

Scheduling, routing and, airline, hub-and-spoke system, 281–297
Spatial pricing, competitive, capacity constraints, 55–61
Static ground-holding policies, for air traffic control, 228–238

T

Time windows, pickup and delivery by local search, 298–311
Traffic
  equilibrium, paradox and metering, 148–160
Traffic control, responsive, equilibrium with, 118–132
Traffic corridor, user equilibrium, 16–24
Traffic counts, time-varying, origin-destination matrix, 363–373
Transshipments, one-to-many distributions with, analytic model, 330–340
Travel distances, distribution system, 341–349
Travelers' postwork activity patterns, modeling, 381–394
Tree network, 3-facility hotelling model, equilibria in, 39–43
TSS Dissertation Abstracts, 200–207
